

CO-BRANDING

CO-BRANDING Opportunity With @BC VAULT

Dear Sirs,

it is with great delight that I can offer you a formal co-branding partnership. We all know that "Cooperative Branding" is when two or more brands share a promotion or idea and shockingly it's hardly used at all in the crypto space.

Co-branding is a useful strategy for many businesses seeking to increase their customer bases, profitability, market share, customer loyalty, brand image, perceived value, and cost savings.

We choose partners very carefully and you would be among the first ones to collaborate on co-branding to create synergies based on the unique strengths of each brand. Simply put, our cooperation will capitalize on increased customer awareness for both of us and foremost **value to your audience.**

Renato Uhl,
CEO BC Vault

About US

Team With 20 Years of IT Security Expertise

From the ground up, almost everyone in our team, comes from a technical background, computer engineering, IT security, electrical engineering, and mathematics. **REAL security** was founded in 2002 as a small expert team handling the most complex IT security projects in the Adriatic region. Today, Real security core business is in the commercial security space with teams handling embedded to enterprise services, along with cutting edge product development and research in blockchain.

As a company working for almost 20 years in the IT security industry, we've successfully managed the most critical projects for the financial sector, telco environment and government infrastructure. We understand and know how to handle the most demanding projects for protecting and securing precious data. We used all this experience and knowledge to design and produce the **BC VAULT** crypto hardware wallet, a product or better to say a complete solution for the blockchain industry and regular users alike.

Forbes

"Only a few solutions had zero security incidents, such as BC Vault. Unique combination of security and usability is transforming hardware wallet industry."

Best Rated Crypto Hardware Wallet

On Trustpilot

The idea of bringing a new solution to the market began three years ago, when we decided to create our own solution - the BC Vault - due to a lack of functionalities and operational issues with existing solutions on the market at that time.

We discovered, that by reviewing the available technologies and solutions, we could create a much more secure, stable, convenient, and user-friendly product. A solution that is appropriate for both seasoned and inexperienced users. It's that simple!

Sample Of RATAROSSA EDITION

The screenshot displays the BCVAULT website interface. At the top, the navigation bar includes links for 'Explore More', 'Beginners Guide', 'For Business', 'Download', 'Support', and 'Shop', along with a search icon and a shopping cart icon showing '0.00 €'. The main content area features a 'Ratarossa Bundle' promotion. On the left, a vertical list of product thumbnails shows a hoodie, a wallet, and a USB drive. The central focus is a large image of a dark blue hoodie with the 'BCVAULT' logo and a car illustration. To its right, a white USB drive is shown with the 'BCVAULT' logo and the text 'Wallets are for pocket money. Vaults are for savings.' The right side of the bundle page lists the original price '448.90 €' and the discounted price '321.72 €'. Below this, a description states: 'Ratarossa bundle pack features a Custom-designed BC Vault Quicksilver and a Ratarossa Edition Hoodie in your sizing! No additional discounts are available for this special bundle.' A link for 'BC Vault Quicksilver Ratarossa Edition' is provided. Further down, the 'BC Vault Ratarossa Edition Hoodie' section shows a small hoodie image and selection options for 'Size' and 'Color', both set to 'Choose an option', with a 'Clear' button at the bottom.

Review

Some influencers are already using our affiliate program. The best way is to do a review and teach visitors how to properly protect crypto assets on regular basis.

The review attracted more than 122.000 visitors.

Why Choose BC Vault

We Are Often Asked:” Why Choose the BC Vault Over Ledger Or Trezor?”

Here Are The 30 REASONS & FACTS Why

1. BC Vault Stores Backups Securely

This means that you can give your SD card or Paper QR to a friend without them being able to spend your coins; provided your passwords are long enough and cannot be guessed.

2. No More Time Consuming And User-Unfriendly Applications

BC Vault is fast, reliable and does everything in one single native application. Easily switch between different currencies, add new ones and update your firmware with one click.

3. Proven Security

Each BC Vault houses the private key for a Bitcoin wallet containing 1 BTC. This bounty wallet is encrypted the same way as any other BC Vault wallet. So far no-one has managed to break the encryption and take the bounty.

4. No More Online Attack Vectors

Your private keys are never exposed to any other device.

5. No More Batteries And Wireless Connections

BC Vault does not need to be charged before being used and is protected against wireless attacks.

6. No More Using Switching Between Different Applications

For different cryptocurrencies – BC Vault does the magic in one native application.

7. State Of The Art Random Number Generation

BC Vault creates revolutionary human powered random number generation using the included accelerometer instead of a proprietary chip.

8. BC Vault Provides Deep Exchange Integration

Allowing you to securely swap your coins without leaving the app. All exchange data is cryptographically signed by the exchange and checked on the device itself.

9. Flash Memory Degrades Quickly, Sometimes Even 1 Year Unpowered Can Be Catastrophic

BC Vault uses FeRAM which has a 120 years of data retention rate.

10. No More Hammering Seed Words On A Steel Board

BC Vault's backup system is designed to be as quick and easy as possible for the user.

11. No More Small Display

And incomplete screen information that causes mistakes – BC Vault has a large display showing all information for confirming the transaction. Put away your magnifying glass!

12. No More Fee Mistakes

BC Vault warns you before you spend any excessive amount on a transaction.

13. No Need For More Than One Hardware Wallet

BC Vault offers creation of more than 2000 independent wallets in one device. One BC Vault can be securely shared by multiple people, if they set up their own wallets with unique passwords and pins.

14. No More »Read Protection Attack« And »Seed Extraction Attack«

Like in the case of BIP 39/44 based deterministic wallets and their unfixable security issues due to legacy design – BC Vault uses NON – deterministic wallets, which means that any two wallets on the same device cannot be mathematically linked.

15. No More Fear Of Privacy

With unique chip serial numbers – BC Vault contains no serial or numbers; we know nothing about you.

16. The Device Is Glued Shut

To make a coin thief's job even harder. BC Vault is difficult to open without noticeable damage to the outside.

17. BC Vault Offers You transparent And Seamless SegWit Support.

BC Vault handles SegWit addresses like different variants of a standard addresses. One wallet on the BC Vault contains the sum of all different wallet types. The user never needs to fiddle with implementation details.

18. No More HW Wallets With Successful And Proven Attack Methods

BC Vault according to a Forbes quote belongs to a few solutions that have had zero security incidents.

19. No More Firmware Corruption

BC Vault uses dual flash which protects the firmware even in the case of power or connection loss.

20. BC Vault Supports All ERC-20 Tokens

All manageable in ONE native application.

21. BC Vault Offers Browser Agnostic API support

Even Internet Explorer 11 will work with BC Vault.

22. Existing Solutions Based On The Web3 Library

Can effortlessly add support for BC Vault.

23. Industry Standard

U2F and Windows, Linux and OSX support.

24. BC Vault Enables You Also To Delete Certain Wallets

That you do not want to keep on your device. This will securely erase their private keys and all traces of them in the FeRAM.

25. What Real Users Think Of BC Vault

BC Vault has the highest rating on TRUST PILOT for any cold wallet.

26. BC Vault Has Certificate Of Conformity

And is in compliance with international safety standards: EN 60950-1 :2006 + A 1:2010 + A2:2013 + A 11 :2009 + A 12:2011.

27. BC Vault Has Complete Security Assessment Certificate And Successfully Passed:

Architecture review, Software and Hardware penetration tests and Security review.

28. BC Vault Provides Comfortable And Secure Exchange

Between different crypto currencies you hold on the device.

29. BC Vault Is Available In

English, German, Chinese (Mandarin) and Slovenian language.

30. BC Vault Is Adopted Also for Left Hand Users.

Simply turn the device around and you can use the pad with your left hand!
